

Domain Name System

23 April 2026

- Impersonate a Local Name Server and perform the queries to obtain the IP addresses of the Name Servers of a University located outside Europe.
 - How many queries did you execute?
 - What type(s) of queries?
 - What types of Resource Records do the response messages contain?
 - Does the University implement DNSSEC?
 - How many Name Servers are associated with the University?
 - Do they belong to the same domain?
 - Can you identify the primary Name Server? Why?
- Query one of the Name Servers identified in the previous experiment to obtain the IP addresses of the Name Servers of the domains **unipv.it** and **abc.net**.
 - How many IP addresses did you get? Why?
